## BUBBLE WITCH SAGA

---

**Bubble Witch Saga** is a new bubble shooter game by King.com. It's a new, more progressive version of the hit flash game **Bubble Witch**, in which you progress from level to level, and you have to complete a different challenge with each level you beat. You also compete with your friends to see who can earn the top score on each stage. Can you get the top score out of all of your friends on every stage? For tips and tricks

You can get one star, two stars, or three stars on each stage, depending on the score that you get. The number of total stars that you get allows you to unlock various extras in the game, such as new levels and new power-ups, so scoring high is imperative.

Conserve your energy by playing easy stages when you have only 1 life left. If you beat a stage, you will not lose any energy, but if you lose, you will lose energy. So if your next stage is a hard stage, especially if it's a harder stage that you have been having trouble with, play easy stages for awhile until you have enough coins to buy plenty of extra power ups so that you can take on the harder stage.

Each combo adds spiders, but each shot that you don't knock out other bubbles with will take out spiders, so maximize your spiders by sometimes knocking out smaller combos that you could otherwise knock out by popping the bubbles above them. Sure, it's not the most efficient way to beat a stage, but at the end of a beaten stage, when all of the bubbles drop and bounce around off of the spiders, having twice as many spiders for them to bounce off of could net you all sorts of extra multipliers and send your score skyrocketing, because for each spider you have that one bubble hits, your bonus goes up by hundreds or even thousands of points. Having a ton of spiders on the stage could skyrocket your score into unheard-of territory.

---

## GAME NOT LOADING PROPERLY?

---

If your game is not loading properly, there are a couple of things you can do.

### STEP ONE

you must keep your **BROWSER clean** in order for it to run at an optimum level.

To do this you must **clean your cache** on a regular basis.

If you find your game will NOT LOAD or it is slow and Sluggish, use the appropriate link below:

**GOOGLE CHROME**

**MOZILLA FIREFOX**

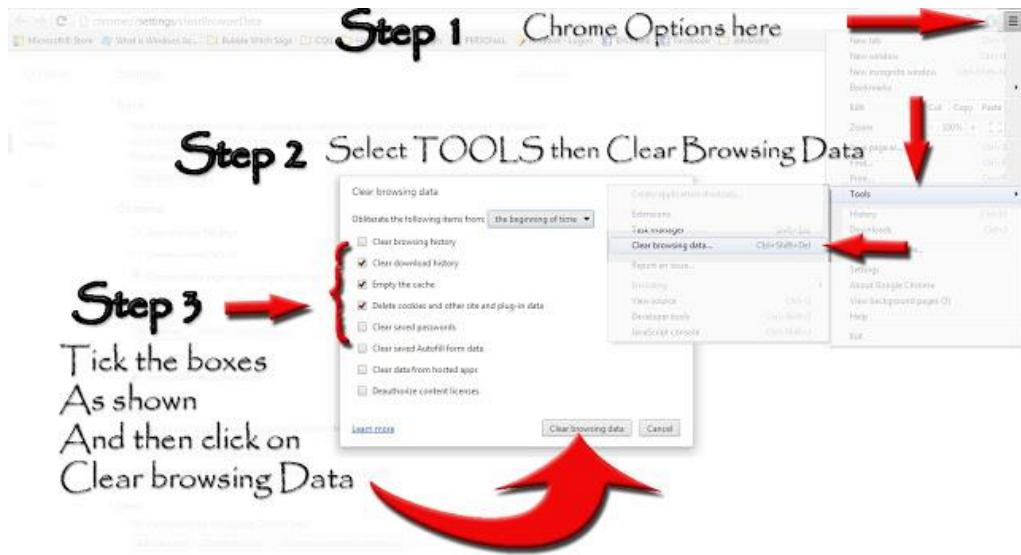

**INTERNET EXPLORER**

*After cleaning, please restart your Browser.*

(If you are using Internet Explorer then I recommend you change to **GOOGLE CHROME**.

Internet Explorer (IE) is bug-ridden and a much slower browser. However, if you wish to keep it then I strongly recommend you upgrade to the latest version and that you have current updates.)

Where to clean browser in Chrome:

## STEP TWO

After you clean your browser, if the game is still not working properly, try doing a **FULL SHUTDOWN** of your computer, Wait a few minutes; then restart.

This gives it a chance to totally clear all the temporary memory so that it can work more efficiently.

### EXPLANATION! PLEASE READ!

#### Why do we ask that you Clear Cache and Shut Down your computer?

Cache is like a little memory bank in your Browser (Internet Explorer, Firefox and Chrome). You have one in all parts of your computer as well, but the one we are talking about is the cache in your Browsers.

EVERY TIME YOU VISIT A SITE, this little memory adds to the cache and sits there waiting to be used the next time you visit rather than start from scratch.

## **If cache clogs up my system - why do I need it at all?**

Well, it is designed to make your web surfing faster because your system uses the cache to load previously visited pages.

It's a bad thing when it has been collecting thousands of data bits and is never cleared. Your computer becomes slow and sluggish and basically does not perform as it should. Clearing cache it gives it a fresh start AND in the case of when you have issues, it will STOP sending you to the cached version of that page and actually go to the site from scratch.

## **Why do we ask you to do perform a full SHUT DOWN?**

Every computer has memory. Each time a program (software) is activated it is using up memory. Every time you copy and paste, you are using up memory. All those little programs that start up when you start up your computer are using up memory. Unless you completely SHUT DOWN and release all the memory, your computer, over time (depending on your usage and your programs accessed) will slow down the performance time of your games.

**NOTE: A reboot does NOT release the memory.**

**Only a full SHUT DOWN will do that.**

So if your game is not working as it should or if Adobe Flash is crashing, nine times out of ten it will be that your cache needs clearing and your system needs a Shut Down.

**If clearing your cache and performing a full Shut Down does not solve the problem, then go to**

## **STEP THREE**

If the game is still not working properly, run a FULL VIRUS SCAN for unknown viruses and/or Trojans. These can prevent your game from loading. Use good anti-virus software and make sure it has current virus/Trojan definitions.(Please do not ask for a recommendation of software.)

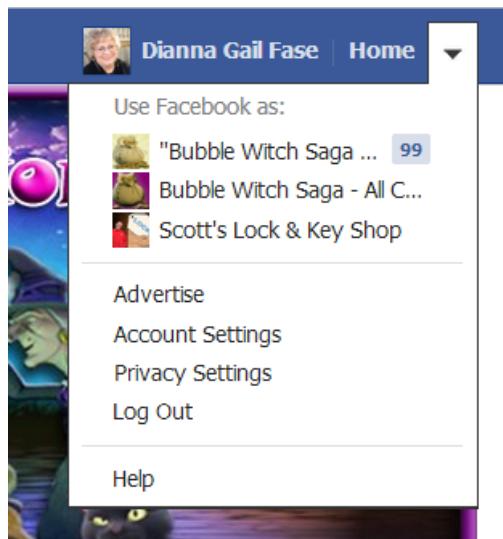

## **STEP FOUR**

If the game is still not working properly, try removing and re-installing the application. You will not lose your data.

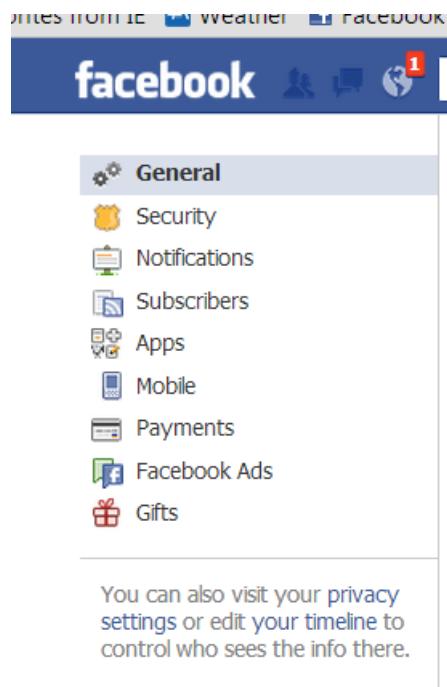

---

## HOW TO REMOVE AND RE-INSTALL BUBBLE WITCH SAGA

---

### 2. Go to Apps

### 3. Find Bubble Witch Saga

Click "x" on right side to remove App

The screenshot shows the 'App Settings' section of a Facebook account. It displays a list of authorized apps. The first item is 'Bubble Witch Saga', which was authorized 'Less than 24 hours ago'. There are 'Edit' and 'x' buttons next to the app entry.

### 4. Search and go to Bubble Witch Saga App and re-install game

The screenshot shows a search results page on a mobile device. The search term 'bu' has been entered into the search bar. The results are categorized into 'Apps' and 'Groups'. Under 'Apps', there are two entries: 'Bubble Witch Saga' (Game, 17,000,000 monthly users) and 'Bubble Island' (Game, 6,500,000 monthly users). Under 'Groups', there are three entries: 'Bubble Witch Saga - ALL HELP' (Group, 3,783 members), 'Administration Group - Bubble Witch' (Group, 7 members), and 'Bubble Witch Saga Fan Site Group' (Group, 3,039 members).

## STEP FIVE

If the previous four steps have not resolved your problem, then please file a bug report with the developer. Instructions given below:

### CONTACT BUBBLE WITCH SAGA DEVELOPERS

Contact Developer  
here

## HOW TO CREATE COINS FOR YOU AND YOUR FRIENDS

---

### Create Coins for you and Your Friends

There are two easy ways to generate coins: alone and with your friends.

1. You can send HEARTS to all your friends and as they accept them, they click to "Accept &Send" and return 100 coins to you. As of right now, you can send hearts to each other as often as you like. I would pick a few good friends and bounce them back and forth for a while so you can gather up some good coinage. All you need to do is keep logging in and out again; making EVEN MORE coins without having to click all over the Map!

You know how it's a pain in the BUTT to click on all the hearts?

Well I just killed myself so I was down a life, then REQUESTED lives from friends. You can only do 50 at a time but you can do it as often as you wish.

When your friends send you a LIFE you will get coins. You then get the option to SEND BACK to them; saves a heap of time.

2. By replaying easy levels, you can get in game bonuses.

1 star = 50 coins

2 stars = 100 coins

3 stars = 250 coins

When you post a bonus, you and your friends can both claim it, BUT, you can only claim a bonus from a friend ONCE so make it a big one!!

# Charm of Magic - Free

Need to use ALL POTIONS at Once but can't afford the CHARM OF MAGIC?

Just select all four potions REALLY FAST!!!

Doesn't matter the order just do it so fast that the first one has not had time to register by the time you get to the last.

Works 99% of the time. But you have to be QUICK.

## ***Please Note:***

For this to work you have to be completely out of potions. Don't attempt this if you have potions left over.

---

## PRECISION SHOTS - FOR FREE!

---

Finding it hard reaching those tricky shots when playing Bubble Witch Saga?

Not Any More!

---

## MORE LIVES

---

Sick of running out of lives - Here's a GREAT TIP.

The FIRST time you lose a LIFE, stop for a moment and send out REQUESTS to your Friends for lives.

If you send 49 requests then you can send more later.

Once you run out completely, REFRESH the Game and all the lives your friends have sent will drop in.

Any wasted lives convert into 100 coins each there is nothing to lose and everything to gain.

# HOW TO COLLECT COINS FROM YOUR WALL

Please remember to return your gifts. If you use the auto Collector select a longer time frame on Auto so you have time to click SEND to all your friends gifts. After all, this is a social game and we all rely on each other for coins, lives, etc.

Depending on your internet speed, you can set it up to give you time to return gifts. Ten seconds is the minimum needed but you may have to slow it down a bit. The instructions are very easy to follow. The program will give you a suggested time to suit your internet connection.

## Having Problems with the Collector?

You have to make sure you have allowed Bubble Witch on your home page. Many remove it without knowing they have.

To check your settings go to your home page

Look down the bottom on the RIGHT you will see EDIT OPTIONS

Click on EDIT OPTIONS and you can then see if you have Bubble Witch Blocked.

## ***HOW TO GET MORE STARS***

---

**The most commonly asked questions are:**

1. How do I increase my score so that I can get through a level with at least one Star?
2. How do I get my score up so I can get 3 stars on each level?
3. How does the game score?

**Here is the description and Instructions**

### **Description of Game**

The three witches are looking for a new addition to their circle. You have been invited to their haunted house to prove your worth. Can you create enough spiders and keep the cauldron bubbling?

**Instructions:**

Aim and shoot with the mouse. Match 3 of the same color to remove them.

Every shot that bursts bubbles will add a new spider. If you don't burst bubbles, two spiders are removed.

The score for the falling bubbles increase every time they bounce on a spider.

Sound simple enough?

Ok, the more points thing.... These are the things you need to remember:  
Balls bouncing on Spiders are worth MORE than straight shooting them.

You create spiders by shooting a 3 ball or more combinations.

You get gold spiders by bursting balls 3 times in a row.

Green spiders make your balls multiply when they bounce on them. Turn Blue spiders Green by bursting ball combinations 5 times in a row.

If you have 10 gold spiders you can't get a green one.

If you're nearly ready to drop the ceiling and have enough balls left you can miss 2 shots so you lose 4 gold spiders. The spiders will come back one by one as blue ones and of the four you lost one will come back green.

Make sure you use the missed shots to make pairs so you have enough to not miss any for at LEAST 5 shots to get your green spider.

Then you can drop the ceiling.

## **How can I make sure I shoot ball combos 5 times in a row?**

Always line up your next shot. Think to yourself: if I shoot this green, will I then be able to shoot the red that is in the cauldron? You don't want to miss a 3 bubble combo or you will lose spiders.

Always remember that falling balls are worth much more than balls that just burst. Keep as many spiders at the bottom as you can by never missing. Never miss by always lining up your next shot.

With the Color changes you have to think even more. (This is not just a game of luck!)

Right now that cluster is red and I have a red ball, so, I will switch it to the blue, shoot over there and then shoot those reds once they have turned gold...

## **The next thing, don't always take the EASY shot.**

If 2 balls are close to a wall you can drop a bunch if you shoot the two that are holding them up.

See picture below:

See the 2 Reds that the pointer is pointing to? If you hit those you will drop that side and there will be lots of bubbles to bounce. The easy shot is to the left. That is what I mean; the EASY shot is not always the BEST shot.

Now once I clear that side I then have a WALL that I can bounce balls off to clear out the middle, other side or ceiling if I want, depending on what I need. (This is called "bank shots.") If it is one of those levels where you can't see the ceiling, then concentrate on clearing the lower ones. This is made a LOT easier if you can bank shots.

## THE GAP

Don't be so focused on shooting 2 ball clusters to make 3 that you miss a GAP opportunity. In the example picture below, you will see I have a BLUE ball ready to shoot and instead of shooting at either side, I shoot right in the middle.

Now the Gold is taking up the ceiling and I have both Blue and Gold in my pot. Why would I shoot the Blue and not the gold?

So I can get another spider dangling before I drop the ceiling!

Remember:

3 ball hits = spiders

Balls bouncing on spiders = more points

**NOTE:** Note all GAPS are this easy to see. The gaps can also be just one ball either side, or they can be angled, and you don't think about it because they are not together... Just remember to keep a look out for things like this.

## **And remember,**

Don't rush levels. That's the GREAT thing about this game; It's not timed. You can walk away mid-game to make a coffee and come back and sit and think.

Don't think - "Oh no I have to hurry up and clear a path!" You don't. The bomb ONLY ticks down by the number of shots you make so go and have a coffee then look again.

You'll be surprised the shots you can see with fresh eyes.

## **GAME SCORING**

There are three kinds of spiders: Normal, Double and Split.

Normal spiders are the most common ones. They are greyish blue, and you can have a maximum of 10 spiders, regardless of type.

Double spiders are yellow and give you twice the score when the bubbles bounce on them. Double spiders are generated every time you burst bubbles with 3 shots in a row. Normal spiders can also be upgraded to Double spiders if you have all 10 spiders. In that case, every 3rd bursting shot will upgrade one spider to a Double spider.

**Split spiders** are green and split all bubbles that bounce on them into 2 different bubbles. A split spider becomes a normal spider a short while after it has been hit for the first time. Split spiders are created when you make 5 bursting shots in a row. You can also upgrade Normal spiders to Split spiders by shooting 5 bursting shots in a row when you have 10 spiders on the screen.

Bursting a bubble: 10 points

If you shoot several bursting shots in a row, the score will increase with 5 points per bubble for each shot.

Example: You shoot 4 bursting shots in a row, and with the 5th shot, you burst 3 bubbles. Your score for that shot will be  $(5+5+5+5+5) \times 3 = 75$  points.

### Falling bubbles

1 bounce: 25 points

2 bounces: 50 points

3 bounces: 100 points

4+ bounces: +100 points per bounce.

Example: A falling bubble bounces 5 times. The score will be  $(25 + 50 + 100 + 100 + 100) = 375$  points. If a spider is a Double spider, the score for that spider will be doubled. Every falling bubble will also fall into one of the cauldrons, adding the 100, 500 or 1000 points on top of the bounce score.

Note that the score popup over the cauldrons can add several bubbles into one score if a lot of bubbles fall down at once.

---

### WHAT IS A GREEN SPIDER?

---

When a Bubble bounces on a GREEN spider, the Bubble multiplies. The more Bubbles that fall into your Cauldron the more points you receive.

BLUE Spiders will turn GREEN if you shoot a 3-bubble cluster 5 times ( $5 \times 3+$ ) consecutively. The tips will often tell you to deliberately create these clusters, if you have enough bubbles, so you can create green spiders.

Once a Bubble drops onto a GREEN Spider it will return to BLUE and you will have to do your 5 x 3+ combinations again to return it to GREEN.

YELLOW spiders cannot be turned into GREEN spiders.

GREEN spiders have the highest value; then YELLOW; and BLUE is the least, so try to end your game with GREEN and YELLOW spiders.

## TIP FOR THOSE WITHOUT CHARMS:

Try to make sure that your 5 x 3+ combinations do NOT drop any surrounding balls. Save that for the Last Shot when you drop the ceiling.

## TIP FOR THOSE WITH CHARMS:

If you purchased RAINBOW bubbles and you get to the end and have any left over, if you have a blue spider you can shoot the rainbow bubble to deliberately miss and it will become a green spider.

- You can do the same thing with the Salvation Charm....and the Shattering Charm.
- **"DELIBERATELY MISS" MEANS:** Shoot the rainbow ball at an infection, at a row of black bubbles or an empty spot on the top. As long as it doesn't hit any normal bubbles it will turn a BLUE spider GREEN. For those who have the "skull" and the "shattering" charm the same rule applies.
- If you get to the end and you have not used them, and you have blue spiders, you can use these charms and deliberately miss and it will turn BLUE Spiders to GREEN. Potentially you can turn two unused "Rainbow Potions", two unused "Skull Charms" and one "Shattering Charm" into GREEN Spiders, but only if you have all 10 spiders, 5 of which are already BLUE

# INTRODUCTION

---

Witch Country was a peaceful and happy place, until the day the evil spirits appeared. Under their dark influence the animals fled and the crops withered in the fields. Hope was almost gone when the terrified villagers turned to the three great witches, Hazel, Selma and Luna.

The witches agreed to take on the challenge, but to succeed they will need help from one brave hero. By mixing ingredients in the witches' cauldron you must help them to fight evil and free the land, one region at a time. You will travel far through strange places, facing new danger at every turn, until you finally reach the far north where the Lord of Shadows lies in wait. Can you overcome impossible odds, defeat the dark spell and free the realm from evil forever? There is no time to lose! The witches are ready, and the bubbles are waiting...

## Spiders

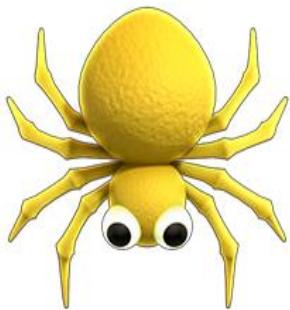

The spiders are your friends! Your points will be increased when falling bubbles happen to bounce on the spiders below. The more spiders a falling bubble hits, the more points you get!

### BLUE SPIDERS

---

Blue spiders are basic spiders for single points.

## YELLOW SPIDERS

---

Yellow spiders give you double points.

## GREEN SPIDERS

---

Green spiders are special and will clone the falling bubble to create another bubble.

# WISHES

---

## WISH OF FORESIGHT

---

Views and switches 3 bubbles in the cauldron instead of 2.

## WISH OF SALVATION

---

Neutralizes the evil Doom Bubbles without getting hurt.

## WISH OF DISARM

---

Activates this wish to disarm a bomb.

## WISH OF ANDITDOTE

---

Heals infected bubbles from the curse (except the original infection).

## WISH OF PRECISION

---

Extends your aim, which helps your accuracy.

## WISH OF SCROLLING

---

Lets you scroll up to the ceiling to see all the bubbles.

## WISH OF INSURANCE

---

Allows you to survive a Doom Bubble hit once.

## WISH OF WEBBINGS

---

Covers the largest jars with fragile spider webs (13 bounces).

## WISH OF DELAY

---

Delays the morph bubbles so they change only on every other shot.

## WISH OF SHATTERING

---

Shoots to shatter a block of Crystal Bubbles

## COINS

---

Coins can be used to buy magic potions before the start of a level and to pay off the evil spirits, so that you can proceed further in the game.

Every time you complete a level, you receive free coins as a reward. You can save your coins over several levels and then buy magic potions when you have enough. You can also purchase coins from One-Eyed Wilbur's shop!

---

# MAGIC POTIONS

---

## GOLDEN SPIDERS

---

Start with 2 Golden Spiders, and you can turn two blue spiders into gold spiders at the end of the level

## EXTRA BUBBLES

---

This potion gives you 7 extra bubbles.

## EXTRA CEILING HOLES

---

To complete a level, you need to clear 9 holes in the ceiling. This potion clears 3 of these holes for you!

## RAINBOW BUBBLE

---

Rainbow Bubble magic potion gives you a bubble in the game that can be any colour you want it to be. Very powerful!

## **GENERAL TIPS AND TRICKS**

---

1. You should score high in every level. Scoring high will help you earn stars. Players usually earn one, two or three stars based on the score they achieve in each level. Depending on the number of stars earned, players unlock power-ups and new levels
2. There will be desperate times when you have only one life left. In such circumstances, it is imperative that you play easy stages. Remember that you will have to beat the easy stages to avoid losing energy. Playing hard stages with just one life left would be quite foolish in my opinion. Just play those easy levels, earn stars and coins and use them to buy power-ups. In this way, you can take on the difficult stages once you're ready.
3. If you have friends on Facebook, ask for more lives. You will be notified when your friends send you life. They will be saved into your account. Sometimes, you might get lives more than the limit per level. For example, if the life limit is 5 and you get 8 lives from your friends, then you can use only 5 lives because of the upper limit. But as soon as you complete a few levels, the limit will increase to 6 or probably 7. To get more lives, you will have to unlock them by earning stars
4. Avoid falling prey to any cheat or hack that promises you more coins, stars or any other goodies. Patience, a keen eye for bubbles and clever use of stars and potions is the key.
5. Some players keep on posting questions on getting past level 43 or 55. Well, the solution for their problem is simple – keep on bursting bubbles. There's no shortcut to success, of course you can buy or unlock some power-ups to make things a bit easy.

**6. New tip:** In the recent levels added to the game, you will find some colourful bubbles encrusted inside crystals. To break the crystals, all you have to do is shoot the adjacent bubbles (the ones which aren't encased by the crystals). Once the crystals get crushed, you can see the color of the bubbles. This aspect makes gameplay difficult, yet interesting.

## MORE TIPS

---

You can unbolt the Rainbow Ball once you gather at least 130 stars

On the top left hand corner of the map, you will find the Charms shop. Click on this button to check what new charms and goodies Wilbur the one-eyed cat has to offer.

Buy the Charm of Precision charm to quickly and easily burst down bubbles. This charm improves your bubble aim, especially when shooting in angles by the way of the wall. You will have to reach level 19 to unlock this item. You can then buy this charm for 119 FB credits.

I repeat, make sure you gather more stars to unlock magic potions. The best way is to replay all completed levels. This gives you more chances to collect stars and unlock these potions.

Enjoy the game, and play! ☺
